

I am IN FAVOR of keeping the 5 wpm morse code testing requirement for the purpose of obtaining an amateur radio operators license for the General and Extra classes.

The ability to send and receive morse code at 5 wpm is needed still to be able to identify transmitters such as FM repeaters, beacons and it would be useful during times of emergencies and disasters when most other modes of radio communications are compromised or disabled.

Respectfully,

Marvin Sunday      N5LGV
